

Project Charter: EdTech Student Success & Program Management Analytics Platform
PROJECT LEAD: SHIVANI BHADKARIYA **DATE:** 12/09/26

Project Summary

Develop a centralized EdTech analytics solution to monitor student success, identify at-risk students, track program performance, and support data-driven decision-making.

Project Goals & Objectives

- Improve visibility into student performance, engagement, and program health.
- Identify at-risk students early to enable timely academic and engagement interventions.
- Monitor operational issues, resolution timelines, and SLA performance.
- Enable data-driven program decisions through measurable KPIs and actionable insights.

Key Deliverables

- Integrated EdTech Program Management Database covering student, academic, faculty, support, and feedback data.
- Interactive Power BI dashboard for student success, program performance, operational health, SLA monitoring, and student experience.
- Student Risk & Performance Analysis with key intervention areas.
- Program Management Framework: Charter, RACI, risk/issue management, and Agile/Scrum execution plan.
- Management Insights & Action Plan plus portfolio documentation for GitHub.

Scope & Exclusions

In-Scope:

- Student academic performance, attendance, assignments, course completion and risk analysis.
- Student support issue tracking, SLA compliance and resolution performance.
- Student feedback and experience analysis.
- Program- and semester-level KPI monitoring through Power BI.
- Data preparation, validation and integration for program reporting.
- Program management documentation, risk management and actionable recommendations.

Out-of-Scope:

- Integration with a live university LMS, CRM or ERP system.
- Real-time production data or automated data pipelines.
- Direct implementation of student interventions or academic policy changes.
- Financial forecasting and institutional revenue analysis.
- Deployment of the solution into a live EdTech production environment.

Success Criteria / KPIs

- **Student Success:** Attendance %, Pass Rate %, Course Completion %, Assignment Submission %, and At-Risk Students.
- **Operational Performance:** Total Issues, Open Tickets, SLA Compliance %, and Average Resolution TAT.
- **Student Experience:** Average Student Feedback Rating.
- **Project Success:** Accurate program- and semester-level visibility with actionable management insights.

Benefits

- Improved visibility into student performance and program health.
- Early identification of at-risk students for timely intervention.
- Better monitoring of support issues, SLA compliance, and resolution performance.
- Faster, data-driven program decisions and clearer management priorities.

Costs / Resources

- Human Resources: Project planning, data preparation, analysis, dashboard development, and documentation.
- Technology: Python/Jupyter Notebook, Microsoft Excel, and Power BI Desktop.
- Time & Effort: Development, testing, validation, dashboard QA, and project documentation.
- Data: Synthetic portfolio data; no external data acquisition cost.

Risks, Assumptions & Constraints

- **Risks:** Data inconsistencies may affect KPI reliability; operational backlogs may require prioritization; structural changes may affect reporting.
- **Assumptions:** Synthetic data represents typical EdTech scenarios; KPI and SLA definitions remain consistent.
- **Constraints:** No live institutional systems or real-time data; analysis is limited to defined datasets; interventions are outside project scope.

Appendix

- Power BI Dashboard – Executive Summary, Student Success, Issue & SLA Management, and Student Experience.
- Data Model and Data Dictionary.
- RACI Matrix.
- Risk & Issue Register.
- Agile/Scrum execution artifacts.
- Management Insights & Recommended Action Plan.
- Project documentation and supporting analysis.
